

Dear Manzelli,

We are an Education and High Tech Center in Adana and İstanbul. We are preparing new economy projects thru Turkey and other countries. We prepared an Internet project called Orhun for Internet 3 actions. But we understood that this level was high and not clear. We checked your Mental Change project. We believe that we have serious effects to improve your project cycle.

Our inner projects are interested in Internet phase 3. But we accept that environment is not available for Internet 3 operations. So we decided to help Internet 1/2 phase projects. We think that we can improve your ideals and perspectives. We'll help your actions for knowledge society to enhance quality of life depend on your request.

Firstly, we are model maker. We want to develop education model for K12 and Knowledge Economy called Ayfer GOK. Now we are preparing education model for Arizona/USA and Turkey K12 schools. We want to extend this K12 model for European schools. We started to implement Ayfer GOK K12 model. But we see that if we integrate this model, we can have new perspectives and knowledge and culture and ideas.

Ayfer GOK Education Model

We know that European project is called Socrates. This is very effective action to start new experience and feedback thru EU. But we believe that this is not including effective model to understand knowledge economy and also Orhun. So we decided to develop and implement shadow based model called Ayfer GOK. We have some deep points like direct truth or styles for education systems. We are also preparing models to see know-how time and material effects and human based revolutions for alternative systems for power based synergy. We can see a lot of apple in same location or have a lot of hands to eat a lot of apple in same time.

Deep Analysis in Shadowed Environments

We are coach and leaders for new economy knowledge economy and Orhun. But we need to expand and to increase community and citizen culture for inter relations. But we have only undefined mumble data sources to communicate each other. But we want to increase production quality and quality of life. We need new layers in education model to cover any action and proposals. We design shadowed layers to stop break points. Shadow layers are protected levels and also one way to pump elements sets and also factors with effects. Analyze style is very important for what and why operations. We can reach same know how from different perspectives styles "look & feel" structures.

Rules

Models are interested in definite logical actions. But we must expand this for sign and covers thru windows and gates to keep layers in our life cycles. Problem and also paradox is here. Can we develop solution and problem sub sets in same cycle? We are same perspectives to analyze inner projects. We can define new syntax to cover logical operations for new actions. On the side, we can advice some relations and attributes for continues event sub sets. We can manage hyper pipes and conversation bridges to catch feeling and behaviors. Catch and bridge techniques includes sub terminals to go our inner life and to speak everything inner time sections. Time sections are relative and interested in material effects in our world.

Model Definition

We are manager and key maker for any phase-events. We must define elements and sets for every sub events. We cover elements and relations for public actions. I mean, we can only understand material and time special actions and also rivers on road map in civilization thru inner cycle like self motivated book based cultures and sub sets are including roads telling policy and rotating from base degree to dream degree like feeling seeing speaking reading thinking. Also we must real degree to go from one to one inter relations like coaching and leaders multi life multi location and speed free structure that is sub thought such as life and mind and spending energy effort to obtain experience.

Availability

Every element and theorem includes sub margin to understand why and who definition. But today's tech includes new perspectives to define new rules and elements over the time. So we can understand new rules and catch point inner section thru project implementation cycle.

Explanations about Project Orhun

We are self project called Orhun for inner cycle. We saw that your M-Change has similar effects for community and government. We can define some rules and points and different perspectives operational aspects and behaviors. We are same ideal to improve quality of life. But we can manage same rules and actions for ant time or bee time. Paradox is here. We can have deep analysis or global perspectives. We can suggest different cultures. We can have migration plans for any time and sections. We are same geographic area and EU. So we can work together and develop strategies for same projects. We offer to work in same projects, to study in project goals. We are ready to pump our perspectives and synergy your M-Change project to enhance and to understand Orhun Epic. Now we are preparing migration plans for New Economy and M-Change rapidly. We are preparing converter center and convert models and also road maps to integrate from your efforts to our inner cycle. Problem solution is brain and fundamental cultures to reach enhance section or life style. Maybe you're interested in our migration plan or supply chain or not. We're insisting on to do it. If you help us, we'll be glad. Maybe, you'll spend 15 years to have tech implementation to earn money. But we are earning money in our inner cycle.

Preparing Models

Models are case sensitive and tell perspectives and goals. We are hard rules to define anything or events with together. We can suggest some standup points to define hardly. Hard direct and including some objects are real environment to understand what we'll do. We have samples and know how for science, wisdom, strength. Computer science and Internet is human based converter from wisdom to strength. So we can define every model for digital environment easily. Problem is material and time effects on wisdom. But this is not problem to understand models and channels on road map. Hint, past eternity and eternal are continues movement points to see action and life time periods and effects for natural environment includes human age signs words birds etc.

Maybe, you think that this writing is not clear, but we tried to show our inner cycle to inform about our culture and life style.
